

Environmentally Conscious Facilities Services

H1N1 and other germ threats

The most significant public health concern in virtually all commercial environments today is the threat of H1N1. To combat this danger, The Service Fort has developed a comprehensive program to help minimize the opportunity for cross-contamination and illness.

There are three parts to our program:

Hand Hygiene

According to the CDC, the best line of defense against the spread of any germ is proper hand hygiene. The Service Fort offers an array of foam soap systems that are cost effective and are proven to increase hand washing. **We offer free dispensers and installation with a 100% satisfaction guarantee.**

In addition to soap, it is also necessary to have hand sanitizing stations available for use outside of bathroom areas such as hallways, entryways, food prep areas, and break room areas. We offer an array of Purell® wall-mount and free-standing dispensers to meet your specific needs. Touch-free and manual systems are available.

Surface Sanitizing

Another important measure to reduce cross contamination is to frequently sanitize surface areas such as countertops, railings, door handles, and break room areas. We offer Sanitizing sprays that are fast-acting (sanitizes in 30 seconds) and do not require a rinse or wipe down. This product will not leave behind any residue and cost only pennies per quart.

Dry sanitizing sprays and foggers also greatly reduce the spread of germs, bacteria and viruses. These products are a good fit for several facilities that want a no waiting, no wiping and no mess procedure.

Check out the Saniguard® video: www.saniguard.com/

Training and Procedures

We not only provide these products to our customers, but we show them how to use them safely and efficiently. We also provide signage to ensure that everyone in your facility is aware of the precautions you're taking and knows how to properly protect themselves from microbial threats. And we back all of our programs with MSDS documentation, training logs and related information, so you're always in compliance.
